Data Analytics B.A. / Human-Centered AI M.S. student experienced in Python, SQL Server, and R, with hands-on work in ETL pipelines, relational databases, statistical analysis, and interactive dashboards.

EDUCATION

Syracuse University — School of Information Studies
B.A. Applied Data Analytics, Economics Minor — May 2027 (anticipated)
M.S. Applied Human-Centered AI, Combined B.A./M.S. Program — May 2028 (anticipated)
Relevant Coursework: Machine Learning (in progress); Responsible AI (graduate, in progress); Database Management; Python Application Development; Information Visualization; Information Security; Data in Society; Economics of the Digital Economy

PROJECTS

Hybrid Athletics Strength vs. Endurance Dashboard | *Python, Streamlit* — Spring 2026

- Built a modular ETL pipeline integrating three public datasets with hundreds of thousands of athlete records to explore relationships between strength, bodyweight, and endurance.
- Cleaned inconsistent units, missing values, and outliers; engineered strength-to-weight and composite performance metrics and used percentile normalization to compare athlete profiles.
- Developed a multi-page Streamlit dashboard with regression, correlation, and distribution visualizations, plus a personal tool that benchmarks users' lifts against the population.

Trust and Generative AI Use Among STEM Students | *R, Qualtrics* — Spring 2026

- Collaborated on survey design and distribution to measure trust in generative AI and usage frequency among STEM students at U.S. universities.
- Cleaned and validated survey data in R (N = 56), applying quality-control exclusions and reliability checks (Cronbach's α).
- Used linear regression to identify associations between trust and AI usage score ($p = .017$) and weekly usage frequency ($p = .011$); reported effect sizes and 95% confidence intervals.

Relational Database Design and SQL | *SQL Server* — Course Project

- Created tables with proper data types and primary/foreign keys; wrote joins, subqueries, CTEs, and stored procedures.
- Cleaned messy real-world data into queryable relational tables and applied normalization through 3NF.
- Built conceptual and logical data models using Crow's Foot ERDs to define entities, relationships, and keys.

TECHNICAL SKILLS

Languages & Databases: Python, R, SQL Server (joins, subqueries, CTEs, stored procedures), relational design, 3NF, ERDs
Data Analysis & Visualization: pandas, NumPy, SciPy, scikit-learn, tidyverse, seaborn, ggplot2, Tableau, Power BI, Excel
Statistics & Research: Hypothesis testing, linear regression, survey design, scale reliability
Tools: Streamlit, R Shiny, Git/GitHub, REST APIs, Playwright, Qualtrics

EXPERIENCE

PC Builder | *Self-Employed* — 2022 – 2026

- Designed, assembled, and tested custom PCs to meet clients' performance needs and budgets; researched compatibility, recommended components, and diagnosed issues before delivery.

Landscaper | *Equestrian Facility* — 2025 – 2026

- Maintained grounds, barn, and pasture areas independently and as part of a team.
